CSCI 4229/5229 Computer Graphics
Fall 2022

Course Objectives

- Class: Theory and principles
  - Attendance is highly encouraged
- Assignments: Practical OpenGL
  - Applications
- No tests or exams
- By the end of the course you will:
  - Be conversant in computer graphics principles
  - Be well versed in the use of OpenGL
  - Understand what OpenGL does internally

Class Attendance

- If you are in the distance session, it is highly recommended that you join live by Zoom
  - Permits real time interaction
- If you feel ill, attend via Zoom
- Class Attendance in person or via Zoom is expected
  - Amplifies expectations and issues related to assignments
  - Covers additional examples not on Canvas

Course Outline

- Basics (1/3)
  - Projections, transformations, clipping, rendering, text, color, hidden edge and surface removal, and interaction
- Advanced (1/3)
  - Illumination, shading, transparency, texture mapping, parametric surfaces, shaders
- Project (1/3)
  - Whatever you're interested in: games, modeling, visualization, 'Google Earth', ...

Why OpenGL?

- Modern, widely used and actively supported
  - Games
  - 3D visualization

- Cross platform
  - Windows
  - Mac
  - *NIX
  - iPhone, Android and WebGL
- Open source and vendor implementations
  - MESA 3D (source code available)
- Many language bindings

Instructor

- Willem A (Vlakkies) Schreüder
- Email: vlakkies@colorado.edu
  - Begin subject with 4229 or 5229
    - I have a draconian mail filter
  - Resend email not answered promptly
- Office Hours:
  - MW 3-4pm via Zoom
  - Email me to set up Zoom at other times
- Weekday Contact Hours: 6:30am - 9:00pm

Assumptions

- You need to be fluent in C
  - Examples are in C
    - You need to know how to program and compile
    - You can do assignments in any language
      - I may need help getting it to work on my system
      - Use C or C++ unless you have a good reason
- You need to be comfortable with linear algebra
    - Vectors, surfaces, normals
    - Matrix and Vector multiplication
  - Dot and cross products
  - Rotation matrices

Grading

- Satisfactory complete all assignments => A
  - The goal is to impress your friends
- Assignments **must** be submitted on time unless prior arrangements are made
  - Most due Thursday evening 11:59 pm
    - Extensions must be requested before due date
  - Grace period until Friday morning at 08:00am
  - **Emailed assignments will not be accepted**
- Assignments must be completed individually
  - Stealing ideas are permitted
  - OpenGL code from the web may be used
  - Make it your own and improve on it

Grading Expectations

- Code reuse is acceptable
  - Give credit where it is due
  - You take responsibility for errors in reused code
  - You need to make a substantial improvement
    - I'm looking to see that you have insight in the material and put in a significant effort
    - Simply turning in downloaded code with minor changes is unacceptable and an Honor Code violation
- No grade => respond to my comments and resubmit
- **Grade <100 means NOT SATISFACTORY (not an A)**

Example Programs

- Illustrates specific aspects
  - mode variable heavily overloaded
  - one concept at a time
- Designed to be a starting point
  - you are expected to improve on it
  - cut and paste will not get you an A
- **The course is no intended to teach OpenGL, but rather the principles underlying graphics**

Text

- OpenGL Programming Guide (9ed)
  - Shreiner et al.
  - "OpenGL Vermillion Book"
  - Older edition was the "OpenGL Red Book"
  - Download previous editions as PDF
  - Recommended but not required

Other Texts

- OpenGL: A Primer, 3/E
  - Edward Angel
  - Excellent and very accessible
  - Inexpensive
  - Third edition adds new material (shaders)
- OpenGL SuperBible: Comprehensive Tutorial and Reference (7ed)
  - Sellers, Wright & Haemel
  - Good all-round theory and applications
  - 6e & 7e is all OpenGL 4 which is a challenge

Theoretical text

- Computer Graphics: Principles & Practice (3ed)

    - Hughes, van Dam, McGuire, Sklar, Foley, Feiner & Akeley

    - Avoid 1ed (Pascal), 2ed (very dated)

    - Get it if you want to know more of the theory

Embedded OpenGL texts

- OpenGL ES 3.0 Programming Guide
  - Ginsburg & Purnomo
  - OpenGL Embeded Systems (iPhone & Android)
  - Subset of OpenGL, 1.3 and 2.0 very different
  - ***Not recommended for beginners***
- iPhone 3D Programming
  - Philip Rideout (O'Reilly series)
  - iPhone specific, but C/C++ oriented so translates well to Android (using the NDK)
  - My personal favorite for portable OpenGL ES

OpenGL Resources

- Safari
- www.google.com
  - Need I say more?
- www.opengl.org
  - Code and tutorials
- nehe.gamedev.net
  - Excellent tutorials
- www.mesa3d.org
  - Code of "internals"
- Class forum

Assignment 0

- Due: **Tuesday** August 30 at **11:59pm**

- Find the course on Canvas

- Submit

  - Your name and study area

  - Platform (Hardware, Graphics, OS, …)

  - Background and interests in computer graphics

  - Project ideas (if you have one already)

  - Distance students let me know about special circumstances and schedules

My information

- Mathematical modeling and data analysis
  - PhD Computational Fluid Dynamics [1986]
  - PhD Parallel Systems (*CU Boulder*) [2005]
- Use graphics for scientific visualization
- Open source bigot
- Program in C, C++, Fortran and Perl

Assignments

Week 1: Who Am I

Week 2: Compile and run Gears

Week 3: Visualizing the Lorenz Attractor

Week 4: Drawing Scene in 3D

Week 5: Orthogonal/Perspective Projection

Week 6: Lighting

Week 7: Lighting and Textures

Week   8:   Project Proposal

Week 10:   Project progress report

Week 12:   Project Review

Week 14:   Project Final

Complete assignments early if you want

How to get started

- Get OpenGL to work on your platform
  - *Installing OpenGL* on Canvas
  - Compile and run *Hello World* examples
- If you are using Windows
  - Install MSYS2 and use pacman
  - Compile with -DUSEGLEW (see my examples)
- If you are on an X based (*NIX) platform:
  - yum install freeglut-devel
  - apt-get install freeglut3-dev
  - Run glxinfo and check if *direct rendering: yes*
- OS/X based on OpenGL
  - Xcode command line
  - Use homebrew to install glfw, SDL, etc

Assignment 1

- Due: Thursday September 8 at 23:59

- Compile and run *gears* and answer a few questions

- This ensures that you have a working OpenGL environment on your machine

- Practice creating a *makefile*

  – After this I expect correct makefiles

Assignment 2

- Due: Thursday September 15 at 23:59
- Write an OpenGL based visualization of the Lorenz Attractor
  - At a minimum show a static line path in 3D
  - User control of attractor parameters
  - Add rotation using cursor keys
  - Use your imagination
- The purpose is scientific visualization
  - Do some science

  http://mathworld.wolfram.com/LorenzAttractor.html
- Example 6 is your friend

Assignment 3

- Due: Thursday September 22 at 23:59
- Write an program to visualize a 3D scene
- Scene must consist of solid 3D objects
  - You must create objects yourself
    - no GLU/GLUT or imported objects
  - You must replicate some generic objects
- Scene must be viewable from different vantage points under user control
- *Add 3D objects to Assignment 2*

Assignment 4

- Due: Thursday September 29 at 23:59
- Write an program to visualize a 3D scene using both orthogonal and perspective projections as well as first person navigation
- *Add perspective projection to Assignment 3*
- *I don't provide a first person example*

Assignment 5

- Due: Thursday October 6 at 23:59
- Write an program to visualize a 3D scene with lighting
  - Make the light move to show lighting effects
  - Select solid objects that show lighting effects
  - Still no glu/glut or imported objects
- *Add lighting to Assignment 4*
- ***WARNING: THIS IS A VERY DIFFICULT ASSIGNMENT***

Assignment 6

- Due: Thursday October 13 at 23:59

- Write an program to visualize a 3D scene with lighting and textures

- End of progression of homework assignments

- *Add textures to Assignment 5*

Project

- Should be a program with a significant graphics component
  - Something useful in your research/work?
  - Graphical front end to simulation
  - Graphical portion of a game
  - Expect more from graduate students
- Deadlines
  - Proposal: Thursday Oct 20
  - Progress: Thursday Nov 3 (progress report)
  - Review: **Tuesday** Nov 29 (must run)
  - Final: **Tuesday** Dec 6 (no resubmit)

Project Grading

- Half the total grade for the class

- The grade assigned for the **final** submission is what is counted

- Grades assigned for the progress report and the review are my assessment of what that final grade will be, and is not counted towards the class grade

  - Canvas is not smart enough to do this, so don't go by the totals it gives you

Topics for CSCI 4239/5239 Advanced Computer Graphics

- Shaders
  - Explicitly programing the GPU
- Embedded Systems
  - iPhone, Android, WebGL
- GPU work threads (CUDA & OpenCL)
- Ray Tracing

Nuts and Bolts

- Complete assignments on any platform
  - Assignments reviewed under Ubuntu 22.04 LTS
  - Set #ifdef so I can compile and run it
- Submit using Canvas
  - Single ZIP file
  - Name executables hw1, hw2, …
  - Create a makefile so I can do *make clean;make*
  - Set window title to *Assignment X: Your Name*
- Include number of hours spent on assignment
- *Check my feedback and resubmit if requested*
- This is a BIG class, **PLEASE** submit cleanly

A few hints

- My machine runs Linux x86_64
  - gcc/g++ with nVidia & GLX
    - -Wall is a **really** good idea
  - case sensitive file names
  - int=32 bit, long=64 bit
  - little-endian
  - fairly good performance
- How to make my life easier
  - Try it on a Linux box
  - Stick to C/C++ unless you have a good reason to use something else
- ***Maintain thy backups…***

100 Values between 0 and 1

The Importance of Graphics
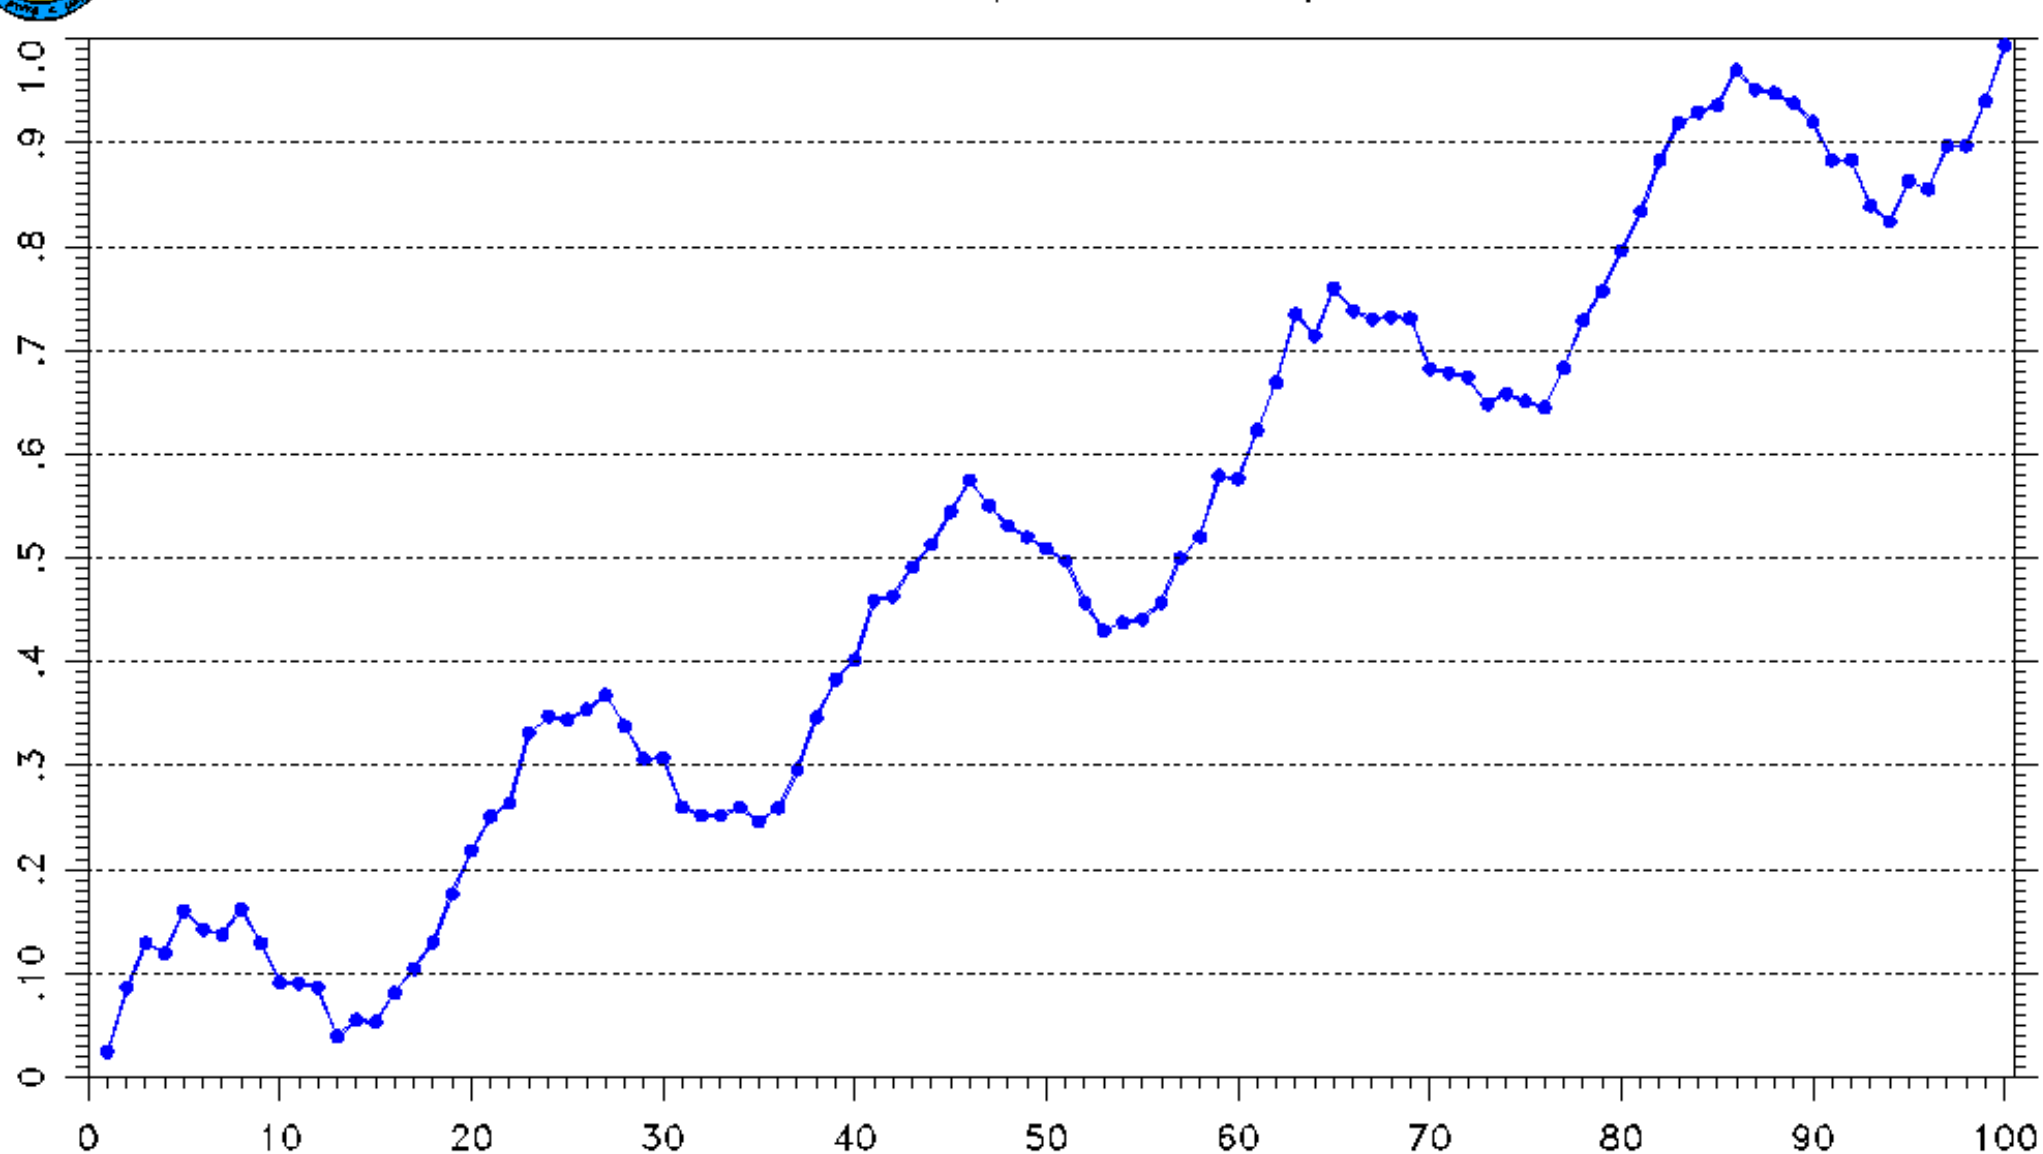

Graphic Design

- 2D vs. 3D
  - Cool vs. informative
- Edward R. Tufte
  - Visual Explanations
  - Envisioning Information
  - The Visual Display of Quantitative Information
 - Beautiful Evidence

Saturn from Cassini Probe

Colorado Fall Colors

What is wrong with this picture?

In the beginning....

Storage Tube Terminals

Storage Display Images

# Color: Multiple Pen Plotters

Raster Graphic Terminals

Color Inkjets

Workstations: Apollo DN 330
12 MHz 68020, 3MB RAM, 70MB disk

Workstation, Desktop, Laptop, Phone, Communicator..

Plotting Packages

- PLOT-10: Tektronix 4010 graphics
- PLOT88: PC graphics
- DISSPLA: NCAR graphics
- GINO: Portable graphics
- DIGLIB: LLNL device-independent, open source
- GKS: Graphics Kernel System (2D vector)
- PHIGS: 3D Interactive Graphics
- OpenGL & DirectX

The rise of OpenGL

- Originated as SGI IrisGL
- Vendor-neutral OpenGL controlled by ARB
- Hides the details of hardware
  - Software emulation when necessary
  - Hardware acceleration when possible
- Supports 2D to advanced 3D graphics
- Portable to most hardware and OS with WGL, AGL and GLX
- Hardware range from phones to Big Iron

Focus of OpenGL

- OpenGL 1 (1992)
  - Hardware abstraction
- OpenGL 2 (2004)
  - Add Shaders (Programming the GPU)
- OpenGL 3 (2008)
  - Focus on shaders and new hardware
  - Deprecates many features
- OpenGL 4 (2010)
  - Core & Compatibility Profiles
  - Merge desktop and embedded versions

Gaming and Graphics

- Text based/ASCII graphics (Pong, PacMan)
- 2D monochrome line graphics (Astroids)
- 2D images & sprites (Mario)
- 3D graphics
  - Flight Simulators (2D -> 3D)
  - First Person Shooters
  - Multi-player games
- Games push the envelope
  - Realism
  - Speed
